

TPO and Rubber Roofing Products

Perimeter Strip installation

Seal Trust™ Perimeter Strip is a 6" wide .045" reinforced EPDM membrane to be installed under the rubber at the perimeter of roof or at angle changes greater than 4" in height. Perimeter Strip comes with 3" butyl mastic sealer pre-applied for installation to EPDM membrane using Tape Primer.

Application Instructions:

Perimeter Strip comes with 3" butyl mastic sealer pre-applied for installation to EPDM membrane using Seal Trust™ Tack Back™, Tape Primer, or Low VOC Tape Primer. Install around the perimeter using 2" or 3" steel plates attached to the roof deck prior to installation of the membrane with proper fasteners spaced per recommended wind uplift area. Clean the back of the sheet at the area of contact with the butyl mastic. Carefully pull release paper off the mastic and press into place. Then roll membrane into mastic using steel roller for optimum results.
